

SCSS

→ Nesting

• In SCSS, you can write selectors inside other selectors.

→ Mixins (same like functions)

• to avoid code repetitions

→ Partials & Imports

Small SCSS files (start with -)

• to split your code

Ex: -header.scss, -footer.scss

```
@import "header";
```

Filename

For value

variable name

```
@mixin button-style($bg-color: blue) {  
  padding: 15px 30px;  
  background-color: $bg-color;  
}
```

```
@include button-style(black);
```

flex-grow?

* Responsive *

px } Absolute units.
cm }

rem → root element

em → nearest ancestor

vw → viewport's width

vh → viewport's height

Relative units.

% → parent element ka nearest dimensions

vmay

vmin

Ex 6 viewport ka width = 500px
viewport ka height = 600px

100 vw = viewport ka width = 500px

1 vw = 5px

* Clamp (LowerLimit, value, upperLimit)

* @media (min-width: 600px) {

}
